

Updating Cloud Manager

You can update Cloud Manager to the latest version or with a patch that NetApp personnel shared with you.

Enabling automatic updates

Cloud Manager can automatically update itself to the latest maintenance or minor release whenever a new version is available. This ensures that you are running the latest version.

About this task

Cloud Manager automatically updates at 12:00 midnight if no operations are running.

Steps

1. In the upper right of the Cloud Manager console, click the task drop-down list, and then select **Settings**.
2. Select the checkbox under Automatic Cloud Manager Updates and then click **Save**.

Updating Cloud Manager to the latest version

You should enable automatic updates to Cloud Manager, but you can always do a manual update directly from the web console. Cloud Manager obtains the software update from a NetApp-owned S3 bucket in AWS.

Before you begin

You should have reviewed [what is new in the release](#) to identify new requirements and changes in support.

About this task

The software update takes a few minutes. Cloud Manager will not be available during the update.

Steps

1. Check whether a new version is available by looking at the lower-right corner of the console:

[Screen shot: Shows the New version available link that is available from the lower-right hand corner of the Cloud Manager web console.]

2. If a new version is available, click **Timeline** to determine whether any tasks are in progress.

If any tasks are in progress, wait for them to finish before you proceed to the next step.

3. In the lower-right of the console, click **New version available**.
4. On the Cloud Manager Software Update page, click **Update** next to the version that you want.
5. Complete the confirmation dialog box, and then click **OK**:
 - a. Keep the option to download a backup because you can use it to restore your Cloud Manager configuration, if necessary.
 - b. Read the terms and conditions, and then select the **I read and approve the terms and conditions (EULA)** check box.
6. When prompted, save the Cloud Manager backup.

Result

Cloud Manager starts the update process. You can log in to the console after a few minutes.

Updating Cloud Manager with a patch

If NetApp shared a patch with you, you can update Cloud Manager with the supplied patch directly from the Cloud Manager web console.

About this task

The patch update typically takes a few minutes. Cloud Manager will not be available during the update.

Steps

1. In the upper-right hand corner of the Cloud Manager console, click the task drop-down list, and then select **Update**.
2. Click the link to update Cloud Manager with the supplied patch.

[Screen shot: Shows the link to update Cloud Manager with a patch.]

3. Complete the confirmation dialog box and then click **OK**:
 - a. Keep the option to download a backup enabled because you can use it to restore your Cloud Manager configuration, if necessary.
 - b. Read the terms and conditions and then select the **I read and approve the terms and conditions (EULA)** check box.
4. Select the patch that you were provided.
5. When prompted, save the Cloud Manager backup.

Result

Cloud Manager applies the patch. You can log in to the console after a few minutes.
