# 1. Uninstalling Cloud Manager

Cloud Manager includes an uninstallation script that you can use to uninstall the software to troubleshoot issues or to permanently remove the software from the host.

## *Steps*

1. If you are going to reinstall Cloud Manager, back up the database before you uninstall the software:
  - a. In the upper-right corner of the Cloud Manager console, click the task drop-down list, and then select **Tools**.
  - b. Click **Backup** and save the backup file to your local machine.
2. From the Linux host, run the uninstallation script:

**`/opt/application/netapp/cloudmanager/bin/uninstall.sh [silent]`**

*silent* runs the script without prompting you for confirmation.
